(54) Title: **CONSIDERING MOBILE STATION CAPABILITY IN NEGOTIATING QUALITY OF SERVICE FOR PACKET SWITCHED SERVICES**(57) Abstract: Mobile station capabilities are
made available to a radio access network node.
The radio access network node determines
whether the requested quality of service can be
supported by the mobile station in its current
cell. These capabilities are taken into account
in negotiating a quality of service for a packet
flow involving the mobile station.
